2010 Excellence in Design Award

Center for Environmental Innovation in Roofing's 2010 Excellence in Design Award – recognizing high performance, energy efficient, environmentally friendly roofing systems.

Application Materials Enclosed

Center for Environmental Innovation in Roofing

Headquartered in Washington, D.C., the Center for Environmental Innovation in Roofing (Center) is a not-for-profit 501 (c)(6) organization that serves as a forum to draw together the entire roofing industry into the common cause of promoting the knowledge base, development and use of environmentally responsible, high performance roof systems.

The Excellence in Design award was originally established by the National Roofing Contractors Association (NRCA) in 2003 to recognize those who design long-lasting, energy-efficient, environmentally friendly roof systems according to accepted industry practices. In 2008, the Center began awarding the Excellence in Design Award.

All the Center and NRCA members, as well as interested industry stakeholders, are encouraged to apply for the 2010 Excellence in Design Award. **To be considered, roof systems must have been designed and installed after January 1, 2007, and an organization must complete an application by March 19, 2010.**

Bridgeport, CT*

Scoring

Applications will be judged by a panel of four roofing industry experts selected by the Center.

Confirmation of Receipt

Upon delivery of each application, the Center will confirm receipt to the email address from which the application was sent. If you do not receive confirmation within one week of sending your application, please contact **Mary Mai at 202.380.3371 or at mary@roofingcenter.org**.

Notification

Judges will determine winners, who will be notified by **April 9, 2010**.

Categories

Overall Innovation

An overall winner will be selected from projects demonstrating a unique advancement in a single category of roof system environmental innovation or unique combination of several categories.

Rooftop Renewable Energy

A category winner will be selected from projects demonstrating innovative production of rooftop energy from renewable sources. Suitable renewable energy sources includes: photo-voltaic, solar thermal, wind or an innovative combination of more than one source.

Roof Energy Efficiency

A category winner will be selected from projects demonstrating innovation in energy efficiency, including the use of cool roofing systems, highly insulated roofing systems, energy-efficient installation practices or an innovative combination of energy efficiency strategies.

Rooftop Water Management

A category winner will be selected from projects demonstrating innovation in storm water management, including the use of vegetated roofing systems, other water-retaining roofing systems and combinations of innovative water-retention and re-use strategies.

Roofing Material Management

A category winner will be selected from projects demonstrating innovation in material management, including the use of recycled or reclaimed materials, the recycling of new or existing roofing materials or combinations of material management strategies that minimize overall environmental impact of roofing materials.
